

FOR IMMEDIATE RELEASE

Mintera Partners on 40 Gbps Deployment: Live Traffic being Carried over Fujitsu FLASHWAVE[®] 7500 ROADM incorporating MI 4000XM Adaptive-DPSK[™] 40 Gbps Module

Acton, Mass., October 28, 2009 – Mintera[®] Corporation, the high performance optical transport systems solutions leader, today announced a major milestone – live 40 Gbps traffic is being carried over a commercial U.S. network created by a Fujitsu FLASHWAVE[®] 7500 Reconfigurable Optical Add/Drop Multiplexer (ROADM) that now incorporates Mintera’s new MI 4000XM Adaptive-DPSK module.

“Mintera’s close and fruitful collaboration with Fujitsu has resulted in achievement of this key milestone” said Terry Unter, Mintera President and CEO. “Mintera is committed to provide the highest level of service and support to customers such as Fujitsu and to continue to deliver best-in-class solutions.”

The patent-pending Adaptive-DPSK technology incorporated in the MI 4000XM DWDM module enables 40 Gbps transport on 50GHz channel-spaced systems and transmission over agile ROADM networks without compromising critical ULH reach. The unit conforms to the industry standard footprint and incorporates an electrical Mux/Demux for compatibility with any 40 Gbps framer. The module has a 300-pin MSA connector with support for the appropriate I2C commands, thus enabling simple hardware and software integration.

Niall Robinson, Mintera’s Vice President of Product Marketing added: “2009 has been an outstanding year for the company including: achievement of full GR-468 qualification in February, a transition to volume production with over 2,500 units now shipped and becoming ISO 9001:2008 certified in August.”

About Mintera Corporation

Mintera is a high bit-rate optical transport systems solution leader enabling migration to 40 and 100 Gbps in metro-core, regional, long-haul, and ultra long-haul networks. Mintera’s flexible multi-service product-set enables service providers to upgrade their existing infrastructure in an evolutionary and seamless fashion. Mintera continues to gain customer traction since demonstrating the world’s fastest ultra long-haul optical transport connection in June 2004. The company is working on higher bit-rate solutions with multiple research and development labs at carriers, systems suppliers, component manufacturers, research institutes and universities to further drive down optical transmission costs.
